To Whom it May Concern:

I am writing to confirm that our course, Core Physics Review (Transcend Review, Inc.), is uniquely positioned to train radiology residents in clinically relevant radiology physics, as part of their required ACGME physics curriculum, part of the NRC-required training in radiation safety and radiopharmacy, and in preparation for passing their American Board of Radiology initial certification (board) exam. We currently serve over 80 programs and more than 800 residents spanning PGY2 to PGY5 levels.

Our course is unique in the composition of our course offering, and in the dual qualifications of our instructor. The course includes an Apple Book (free updates for life), a unique Q&A forum with archived questions going back 7+ years, an on-demand whiteboard-style lecture series, and a challenging multiple-choice question bank. Both the depth of content and the composition of resources allows residents with various learning styles to master this critical material.

As the course instructor, I am dual-trained board-certified MD radiologist and PhD electrical engineer; for historical perspective, Harvard graduated approximately 5 dual-trained MD-PhD electrical engineer physicians in the preceding century. This dual training is helpful to connect technical concepts with clinical relevance, so that residents are learning highly technical scientific concepts that are ultimately meaningful in elevating patient care.

Please do not hesitate to reach out if we can be of further assistance.

Best wishes,

Ram Srinivasan MD PhD
Course Director
